**100% natural & effective solution  
against external parasites**

**CHEMICAL FREE**

# BIOSPOTIX®

n a t u r e   s e c r e t

## PRESENTATION

On contrary to chemical products with neurotoxic effects on insects, **BIOSPOTIX®** is a mechanical approach and acts on contact with fleas and ticks.

Based on Geraniol essential oils, **BIOSPOTIX®** active ingredients dehydrate the Chitin\* and block the insect's respiratory system. Parasites are then repelled by smothering and dehydration.

The gaseous phase of GERANIOL does also help to dehydrate eggs and larvae giving **BIOSPOTIX®** excellent ovicidal and larvicidal properties.

**BIOSPOTIX®** can be used on puppies and kittens aged over 3 months old.

\***The chitin** is the main component of the cell walls, the exoskeletons of insects and arthropods.

## Optimal & effective protection:

3 important phases

### OPTIMAL PROTECTION

-  **Treat** the pet's environment with **BIOSPOTIX® INDOOR Spray**.
-  **Protect** with **BIOSPOTIX® Spot On** and **collars**.
-  **Prevent** new infestations with **BIOSPOTIX® Spray**.

## 1 Treat the environment

### BIOSPOTIX® Indoor Spray

#### *Important Start*

On contrary to our belief, Fleas do not stick permanently on pets and spend most of their time on the floor, carpets, upholstery, kennels, baskets, etc.

Only 5% of adult fleas are on your pet whereas 95% are in the pet's environment in the form of eggs, larvae and pupae.

Therefore, it is strongly recommended to start your treatment with the pet environment.

**BIOSPOTIX®** indoor spray helps you eliminate adult fleas, eggs and larvae from your pets environment.

**Tips:** Regular **vacuuming** will help you picking up adults, eggs, larvae and pupae before they develop. Putting a flea collar in the vacuum bag and emptying the bag frequently are also important. Avoid water and wetting the floor because humidity offers a convenient environment for the development of eggs and larvae.

## 2 Protect your dog and cat

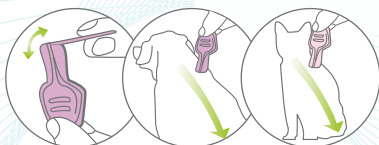

### Pipettes BIOSPOTIX®:

*Simple & natural*

Immediate action. **4 weeks** protection from external parasites (fleas, ticks, lice...).

Apply directly on the skin from the neck to the tail. Renew every month or after bathing your pet.

The active ingredient is spread systematically over the coat via the sebum. Brush after the application to help spread the product quickly.

### BIOSPOTIX® Collar:

*Permanent protection*

Strengthen the protection of the pipette with **BIOSPOTIX®** collar. Up to 4 months protection. Immediate action. Water resistant.

Active ingredients are spread all over your dog or cat's coat via the sebum. Therefore, a collar worn around the neck protects all your pet body and prevents against fleas and ticks infestations.

Place the collar over the neck, leave a space of 2 fingers and cut extra length.

**Tips:** place the remaining collar length in your pet basket or in the vacuum cleaner bags.

### 3 Prevent new infestations

#### Spray BIOSPOTIX®

##### *Preventive action*

Effective solution to avoid new infestation and protect your dog or cat from other infested pets and during walks...

**BIOSPOTIX®** Spray covers your pet's coat with a protective film repelling fleas, ticks and other external parasites.

Spray from 30 cm distance, do not rinse out or dry the coat. Brush to help spread the lotion.

**Immediate action. 48h protection.**

**Tips:** Alternate the usual shampoo with insect repellent shampoo during strong infestation periods.
